Career Objective

As a BCA graduate, I am eager to apply my skills in software development, web and mobile applications, and data management. With a strong foundation in Java, Python, and C++, and a keen interest in cloud computing and cybersecurity, I aim to contribute to innovative projects while continuously learning in a dynamic environment.

Academic Qualification

- **Graduated with a Bachelor of Computer Applications (BCA)** from Bosco Technical Training Society, securing a **CGPA of 8.747**.
- Completed 12th from CBSE Board with **61.6%**
- Completed 10th from CBSE Board with **80.2%**

Project Undertaker

1. Ballot Buddy (Voting Application):

- Developed an Android voting application with a custom UI themed around the college logo, providing a familiar and engaging user experience.
- Integrated user authentication and authorization to ensure secure access and voting eligibility verification. - Implemented features like vote submission tracking and real-time tally updates, ensuring accurate and transparent results.
- Designed an intuitive user interface for a seamless voting experience, including real-time status updates. - Created an election page that displays candidates' names and photos for easy identification during voting.
- Designed an admin-exclusive feature that restricts the visibility of election results, ensuring only authorized personnel can access them.
- Gained experience with Android Studio, XML layouts, and Java programming.
- This App will be used in the college for Club voting.

Domain: Java, Android Studio, XML, Firebase (Authentication), Firebase (Cloud Firestore)

2. Student Management System

- Developed a python program to easy manage the student information.
- It stores an information in various type of file like excel and csv file.
- Program have a feature of data display, data manipulate, data visualization.
 - **Data Display:** It has a feature to access any student data with their name or any other details. - **Data Manipulation:** This feature help to modify any change in student data like create new student record, read student information, update information of student, delete any any record.
 - **Data Visualization:** It has a feature in student management to display data through Bars, Graph, Histogram, Pie Charts.

- It has three different menus to ask every time to choose your preference you want to choose and based on your preference it will display output and fulfill all your needs to project.
- It contains exit option in all the menu of the project to quit all your menu and exit from project.
- It is one of the best creations to easily manage data of all the student information.

Domain: Python (Programming Language),Pandas, NumPy, Matplotlib , CSV(Comma Separated

File)

Achievements:

- My student management system is one of the helpful creations for the school as well as college to store the data.
- Participated in chess competition in college.
- Coordinate in Summer Internship done in my college through Tech Access PVT LTD.
- My Voting Application is being used in the College.
